# Mobile Test Management

Modernize your mobile testing workflow with unique features from Kobiton.

Kobiton's Mobile Test Management provides centralized control over test suites, test runs, and test cases, streamlining processes for individual devices or device groups.

In addition, our AI-driven error analysis efficiently identifies and consolidates common issues across devices. This enables mass remediation, saves time, and optimizes testing effectiveness by grouping related tests with specific device configurations.

Why Choose Kobiton for Your Test Management Needs?

Enhanced Protections for Sensitive Data

Ensure that your testing process complies with the highest security standards by restricting access to test cases that contain sensitive data like username and password pairs.

Mass Remediation

Correct errors that occur across numerous devices in a single remediation workflow, reducing effort by orders of magnitude. View consolidated remediation results.

Scriptless Test Suites

Easily group and execute related tests without the need for scripting, ideal for teams with limited coding resources.This lowers the barrier to effective mobile app testing.
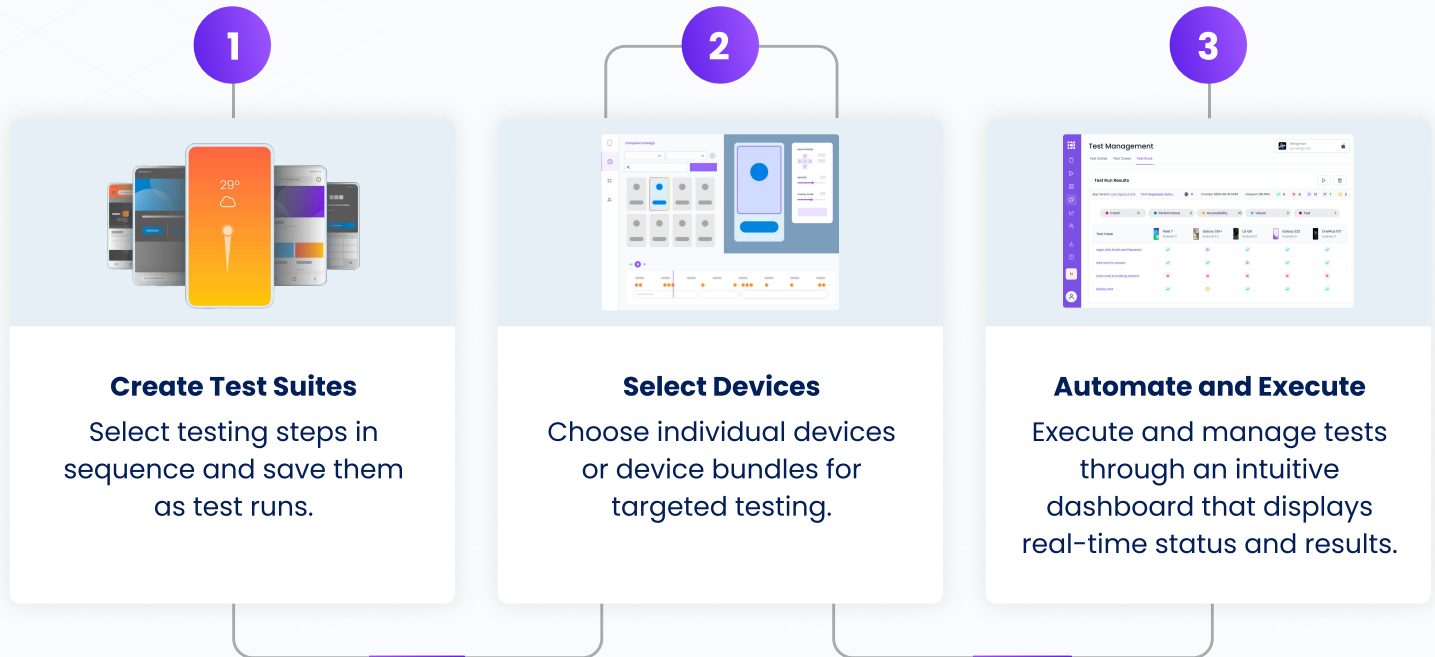

Device Bundle Selection

Enhance test efficiency by selecting device bundles for simultaneous testing, ensuring comprehensive coverage. Ensure your apps work smoothly across devices without the need to manually setup each test.

How It Works: A Seamless Workflow

Kobiton streamlines test case creation by converting manual testing steps directly into test cases. These can be grouped into test suites, allowing for simultaneous execution across multiple devices with a single command. This method not only saves time but also enables comprehensive analysis by aggregating results from all test cases in the suite. It's ideal for smoke and regression tests, or for detailed testing of specific app functionalities.

1 Create Test Suites
Select testing steps in sequence and save them as test runs.

2 Select Devices
Choose individual devices or device bundles for targeted testing.

3 Automate and Execute
Execute and manage tests through an intuitive dashboard that displays real-time status and results.

Kobiton Enhances Your Testing Process

Faster, More Efficient Testing
Reduces the complexity and time involved in setting up and executing tests, particularly across multiple devices.

Enhanced Quality Assurance
Identifies potential issues more quickly and accurately, improving the overall quality of mobile applications.

Seamless Integration
Works effortlessly with existing test management tools, enhancing your current QA processes without the need for extensive changes.
