Kobiton Integrations

Kobiton's Integrations list is long and growing rapidly. Some of our integrations with Applitools and Test.ai cover many functions, and the others are listed below within their respective category.

Integrations via CI/CD

Kobiton supports CI/CD workflows with our vast suite of integrations.

Who Do We Integrate With?

- Jenkins
- CircleCI
- Bitrise
- Travis CI
- GitHub Actions
- GitLab
- Codemagic
- Azure DevOps
- Buildkite

For customers leveraging Kobiton's automation solutions within our Device Lab Management Suite, we still can push pass/fail tests out to any CI/CD tool your team may be using today.

Integrations via Webhook

Kobiton also works intrinsically with a variety of Test Case, Issue, and Web Management tools such as;

- TestRail
- Jira Cloud
- Katalon
